RBC has had a long tradition of innovation, commitment, and quality since the company was founded in 1919. Today, RBC has grown into a world-class manufacturer of standard and custom-engineered bearings and related products, with a product focus on research, testing, and development of the best product for specific applications.

## What We Manufacture

RBC Bearings, with divisions throughout the United States and Europe, provides bearings and precision products for applications in the construction, mining, material handling, transportation and off-highway equipment, robotics and automation, farming, machine tool, and semiconductor equipment industries. Through RBC Aerospace Bearings, the company is a major manufacturer of standard and special bearings and precision products for military and commercial aerospace applications.

RBC's high-quality bearings include:

- **Heavy-Duty Needle Roller Bearings** - Pitchlign® caged heavy duty needle roller bearings, inner rings, type TJ TandemRoller® bearings for long life.
- **Spherical Plain Bearings** - Radial, angular, contact, high misalignment, extended inner ring, QuadLube® long life bearings, ImpactTuff® case carburized bearings, ShimPack® double-acting angular contact bearings, CrossLube® lubrication groove systems, SpreadLock® Seal, Fibriloid® and DuraLube™ self-lubricating bearings, and MillTuff® 3-part bearings.
- **Cam Followers and Yoke Rollers** - Standard stud, heavy stud, yoke type, caged roller followers, RBC Roller® long life cam followers, HexLube® universal cam followers, airframe track rollers. Mastguide rollers and carriage rollers, chain sheaves (for leaf chain), toothless sprockets (for roller chain), and heavy-duty roller bearing construction.
- **Rod Ends** - Commercial and aerospace, precision, Mil-Spec series, self-lubricating, inch and metric. Heim and Schaublin Unibal®
- **Self-Lubricating Bearings** - Radial, thrust, rod ends, spherical plain bearings, high temperature, high loads, inch and metric. Fiberglide®.
- **Thin Section Ball Bearings** - Standard cross sections to one inch. Sizes to 40 inches. Stainless steel and other materials available. Seals available on all sizes and standard cross sections.
- **Airframe Control Bearings** - Ball bearing types, self-lubricating types, needle roller track rollers.
- **Ground, Semiground, and Unground Ball Bearings** - Full complement, utilizes design and burnished races for higher loads, long life, and smooth operation.
- **Ball Screws** - Precision ground and rolled ball screws. Inch and Metric. QuickTurn® Ball Screw Repair Service.
- **Pins and Shafts** - All types of pins, needles, shafts, and rollers.
- **Tapered Roller and Tapered Thrust Bearings** - Case hardened in a variety of sizes, used in Class 8 heavy truck and trailer wheel bearings, final drive transmissions and gear boxes.
- **Custom Designed Bearings** - RBC produces a wide range of custom bearings in various materials for specific applications.

## RBC/Tyson Tapered Roller Bearings

RBC/Tyson Tapered Roller Bearings are manufactured in the Glasgow Kentucky plant to the highest standards from the best grades of bearing quality steel. Both case hardened and through hardened bearings are available. Tyson manufactures the most popular medium sizes and is committed to making sure the bearings you need are in stock. Tyson Bearing's quality system is QS 9000 certified.

## Tyson Tapered Thrust Bearings

RBC/Tyson Tapered Thrust bearings are manufactured in the RBC Oklahoma City, Oklahoma plant. The rollers and races are constructed from high grade bearing steel and are case hardened. Sealed, unsealed and greased versions are available. Tyson manufactures the most popular sizes for truck steer axle, trailer landing gear, and other industrial applications. Most of the sizes shown are stocked.

## How We Can Serve You

RBC has implemented a total quality control system that uses statistical quality control at all facilities, and manufactures in high volume to a just-in-time program.

To serve the ongoing needs of customers, RBC has a network of over 1,600 distributors and sales engineers throughout the US, Europe, and South America, with authorized agents worldwide. For assistance with your bearing application, contact:

**Customer Service - 800.390.3300**

## Warranty

RBC products are warranted for material and workmanship for a period not to exceed 90 days from shipment and for a value not to exceed purchase price. No other warranty is in effect.

## **Tyson Tapered Roller Bearings Company History**

The Tyson Bearing Company was founded in 1929 by Frank Tyson for the purpose of manufacturing a unique design cageless tapered roller bearing. A factory was built in Massillon, Ohio and production began in 1930. In 1939 the company was placed on the Navy approved materials list and became a member of the AFBMA (now the ABMA).

During the war years the company produced a variety of war munitions, as well as bearings. Immediately following the war, production was expanded to include traditional cage type tapered roller bearings.

In 1955, the company was acquired by SKF Industries Inc., but continued to operate under the Tyson name and trademark. In 1965 SKF built a second factory in Glasgow, Kentucky for the purpose of manufacturing Tyson tapered roller bearings for automotive wheel bearing applications. In 1976 the size of the plant was doubled to its current configuration.

In 1981, it was decided to market the products as SKF bearings, and the Tyson trademark was retired from active use.

In the 1980's the market demand for the types of bearing produced by Tyson changed and the result was a consolidation of the production of the Massillon plant into the newer plant in Glasgow. The original plant in Massillon was closed at the end of 1985.

RBC purchased the TRB operations of SKF USA Inc. in June 1999. The name of the company again became Tyson Bearing Company, Inc. and the Tyson brand name and trademark were reactivated after a hiatus of almost 20 years.

In 2001 RBC purchased the assets of Driveline Technologies, an Oklahoma based company that manufactures tapered thrust bearings primarily for the heavy duty truck market. Recognizing the synergies between the two products, the tapered thrust bearings were incorporated into the Tyson product line and offered under the Tyson name.

## **Quality - A Tradition of Tyson Bearing Company**

Many of Tyson's employees have over 30 years experience in the manufacture of tapered roller bearings. Both the Glasgow and Oklahoma City factories are a certified supplier to many of their customers and enjoy an excellent reputation in the industry. Tyson Bearing Company is QS 9000 certified for the design, manufacture and assembly of tapered roller bearings, and the quality systems and equipment are state of the art.

## **Tyson Tapered Roller Bearing Cones and Cups - Available Separately or as Sets**

Tapered roller bearing cups and cones are not just ordinary bearings. A bearing is a complete unit. Cups and cones retain their separate identity and can be purchased separately. They can also be interchanged at will within a given series. In the United States, the majority of tapered roller bearings are purchased as separate cups and cones. Within a given series we can also furnish bearings packaged as a cup and cone set, a complete bearing unit. Due to the variability in other manufacturers' processes, we recommend pairing a Tyson cone and cup for optimum performance in most applications.

## **The Tyson Tapered Roller Bearing - Another Name for Long and Reliable Service**

Although all ABMA-designated inch tapered roller bearings with a given part number are theoretically interchangeable, the design of Tyson bearings and the manufacturing processes in our Glasgow, Kentucky factory provide the benefits and reliability demanded by your application at the most competitive prices offered in the industry for comparable products. The internal geometry provides additional benefits that are lacking in many other products currently being marketed as "equivalent."

## Installation and Maintenance

Tapered roller bearings should always be installed and maintained according to the original equipment manufacturer's recommendations. Failure to lubricate, install, adjust, and maintain these bearings properly can result in shortened bearing life, equipment failure and personal injury.

Tyson tapered roller bearings come from the factory with a light coat of preservative designed to keep the bearings from rusting. It does not provide adequate operating lubrication. The bearings must either be thoroughly greased or immersed in the oil used in oil bath lubrication before assembly. The bearings and lubricant must be kept very clean through the installation process. It is not necessary to remove the preservative coating before installation as long as the bearing is clean.

Adjustment of the bearings is critical to achieving the best possible bearing life. As shown in the graph, a slight amount of preload provides maximum life, but it falls off dramatically if too much preload is applied. Many applications recommend a small amount of end play in the final adjustment because preload is hard to measure without equipment specifically designed for that purpose, and that equipment is not normally available in the field. Again, it is most important that the OEM's instructions are followed with regard to bearing adjustment and maintenance.

## Effect of Preload or Clearance on Life and Failure Mode

## The RBC/Tyson Advantage

### Logarithmic Crowning of Inner Ring Raceways

### Stress Distribution with Different Raceway Profiles

Your best value is RBC Tyson tapered roller bearings:

- Your choice of case hardened or through hardened inner rings, rollers and outer rings
  - Optimized roller flange contact with improved flange and roller large end surfaces
  - Improved roller/raceway contact with superior roller surface finishes and logarithmic inner ring raceway profile
  - Longer service life
  - Increased load carrying capacity
  - Lower maintenance
  - Lower operating temperatures
- Tyson's devotion to quality has made RBC Tyson bearings top performers in some of the most demanding applications.
  - Tyson tapered roller bearings are interchangeable with other tapered roller bearings manufactured to ABMA specifications.
  - RBC is the largest privately owned bearing company in the USA.

### Tyson Tapered Roller Bearing Availability by Part Number

Tyson focuses on manufacturing tapered roller bearings in the dimensional range of 3.5" to 8" cup OD. Tyson can currently manufacture the following cups and cones, listed by series. Not all of these are available from stock and some have minimum purchase quantities. Please consult your RBC/Tyson sales representative regarding availability and pricing of any of these bearings. Part numbers not listed, but within the specified size range will be considered for production on a case by case basis, again please consult your RBC/Tyson sales representative regarding availability of part numbers not listed. Tyson products are available in both bulk and single boxes to meet both your and your customer's packaging requirements.

For ISO Class Bearings, Dimensions in Bold Print are in mm and Weight in kg.

## Tyson Tapered Thrust Bearings

The primary application for these bearings is in the heavy truck and trailer industry. Applications include steer axles for trucks, tractors, and construction equipment, and landing gear for class 8 trailers. Due to the tapered roller design, these bearings offer significant thrust load capacity and can be used in a variety of other applications where that is a requirement. Both the races and rollers of the thrust bearings are case hardened which offers advantages in applications where shock loads and/or misalignment are present.

Tyson utilizes a full complement of rollers where possible, which provides higher load capacity than designs using roller retainers. Also, there is better roller alignment with the full complement design. This improves the life of the bearing.

As an option, Tyson offers many sizes of thrust bearings with an integral seal. These bearings are designated with a -S suffix. This provides ease of installation and simplifies the design of the end product. Bearings can also be supplied greased as an option. Greased bearings are designated with a -GX suffix.

Tyson stocks most of the sizes shown in the following section of this catalog. In addition Tyson will consider adding new sizes to the existing product assortment on a case-by-case basis. Tyson products are available in both bulk and single boxes to meet customers' packaging requirements.

## Tyson Tapered Thrust Bearings

Tyson Tapered Thrust bearings are manufactured in the RBC's Oklahoma City, Oklahoma plant. The rollers and races are constructed from high grade bearing steel and are case hardened. Sealed, unsealed, and greased versions are available. Tyson manufactures the most popular sizes for truck steer axle, trailer landing gear, and other industrial applications. Most of the sizes shown are stocked.

Tyson Tapered Thrust bearings have been developed in 6 configurations. Please refer to the table on the opposite page to determine which style corresponds to your part number.

# Innovation. Commitment. Quality.

RBC has been producing bearings in the USA since 1919. In addition to unique custom bearings, RBC offers a full line of standard industrial and aerospace bearings, including:

## Spherical Plain Bearings

Radial, angular contact, extended inner ring, high misalignment. **QuadLube**<sup>®</sup>, **ImpactTuff**<sup>®</sup>, **SpreadLock**<sup>®</sup> Seal, **CrossLube**<sup>®</sup> bearings, and self-lubricating bearings. Available in inch and metric sizes.

## Rod Ends

Commercial and industrial, precision, Mil-Spec series, self-lubricating, and aircraft. Available in inch and metric sizes.

## Thin Section Ball Bearings

Standard cross sections to one inch. Sizes to 40 inches. Stainless steel and other materials are available. Seals are available on all sizes and standard cross sections.

## Ball Bearings

Precision ground, semigrind, unground. High loads, long life, smooth operation. Offered in caged and full complement configurations.

## Self-Lubricating Bearings

Radial, thrust, rod ends, spherical bearings, high temperature, high loads. Available in inch and metric sizes.

## Cam Followers

Standard stud, heavy stud, yoke type, caged roller followers. Patented **RBC Roller**<sup>®</sup> cylindrical roller cam followers, **HexLube**<sup>®</sup> universal cam followers, airframe track rollers.

## Airframe Control Bearings

Ball bearing types, self-lubricating types, needle roller track rollers.

## Needle Roller Bearings

**Pitchlign**<sup>®</sup> caged heavy duty needle roller bearings, inner rings, **TJ TandemRoller**<sup>®</sup> bearings for long life.

## Pins and Shafts

RBC manufactures all types of pins, needle rollers, shafts, and rollers.

## Tapered Roller Bearings

Case-hardened in a variety of sizes. Used in Class 8 heavy truck and trailer wheel bearings, gearboxes, and final drive transmissions.

## Ball Screws

Precision ground, rolled, ball splines. Long life, low wear, high accuracy. **QuickTurn**<sup>™</sup> Ball Screw Repair Service.

## Specials

RBC manufactures many specialty bearings for the aerospace, oil and energy, semiconductor equipment, packaging, heavy truck, and other industries.
